

Chromagen (ACS) Ltd

## Recent Special Chromagen Projects

Materialized: **2008**

### General description

Chromagen was recently awarded with two significant projects, for state-of-the-art Solar Heating Systems, in Latin America.

In Cuba, Chromagen will supply solar heating systems, to be installed at the "La Estrella" hotel. This 1308 room hotel, one of the most prestigious hotels in the Caribbean region, will heat over 120,000 liters of water, by using over 1700m<sup>2</sup> of Chromagen's sun collectors.

Chromagen (ACS) Ltd

In Chile, Chromagen designs and supplies the main Solar System, for the biggest medical center in Chile - Clínica Dávila. The system is based on an

over 400 sun "collector field", which supports the heating of over 100,000 liters per day. 60% of the water is solar heated, and the rest by a heat-pump backup. The solar system is designed to eliminate the emission of 128 tons of CO<sup>2</sup>, and about 85 tons of GNP annually, previously used. This project was carried out in cooperation with the Chilean Power Company "Chilectra", and "Isener".
